

Tools Equipment Used To Stack Off a Well

1. Suitcase for Hercules Stuffing Boxes is shown below. We do not have them for sale. R&M Energy sales the suitcase for the Hercules stuffing boxes. Below is a link to their site where you can read the specs on this equipment. http://www.rmenergy.com/hercules_polished.html
2. Stack off tool shown below. This is what echometer made and uses. We do not have them for sale, you can build one like ours or one similar. Keep in mind that you need to make it out of strong enough material to support the weight of the heaviest rod string that you have. Also keep in mind that some stuffing boxes do not support weight evenly because the rubbers are being compressed.
3. One bolt, two bolt and three bolt polished rod clamps. Below is a link to their site where you can read the specs on this equipment. <http://www.rmenergy.com/polished.html>
4. Torque wrenches should be used when installing polished rod clamps. The clamps come with proper tightening guidelines.
