Echometer GPS Dongle Information

The Echometer System uses a GPS dongle to tag and determine the well locations. The Echometer TAM software alerts a user when he approaches a well and prompts the user to open the appropriate well information files. The use of a GPS prevents errors applying the data to a specific well and speeds up well testing by automatically selecting the proper well files.

Specifications for the GPS device are:

- USB version 2.0 interface
- Protocol – NMEA
- Operating Temperature -40 C to +85 C
- Startup time (Average)
 - < 1 sec hot start under open sky
 - < 34 sec cold start
- Accuracy 2.5 M CEP
- Tracking Sensitivity -163 dBm
- Acquisition Sensitivity -147 dBm

DECLARATION: We hereby declare that the GPS dongle complies with essential requirements and other related requirements, of the 1999/5/EC R&TTE directive

RoHS CE FC
